More comfort for your guests –
less hassle for your staff...

... with our electronic locking system

Dialock gives you multiple benefits:

The system offers your guests convenient access to the hotel and their rooms at all times, as well as access to those areas of your hotel for which permission has been granted on their electronic key, the Hotel Card (e.g. to the car park or meeting rooms).

The Dialock door terminal is designed as a sturdy stainless steel lock and fulfils the most stringent security standards.

As an intelligent locking system, Dialock will reduce your staff hours while providing you with a constant overview of all movements in and out of your hotel.

Dialock can be extended at a later date: You will be able to adjust the scope of the access solutions to suit changes in your operations – even years later.

As the power supply to your Dialock terminals is provided by batteries, doors can be converted easily and at low cost. No expensive routing of cables is required.

The radio transmission (passive transponder technology) ensures that Dialock operates completely without physical contact and is therefore free from wear, ensuring a long service life. So the system does not require a maintenance agreement, and you will not be burdened by any costs for the up-keep of the system.

This is how Dialock functions in your hotel

- At the reception, each guest will receive a Hotel Card for the room.
- The period of stay is stored on this card. This information can also be transferred from your hotel software.
- Outside his or her room, your guest holds the card in front of the terminal, which will then automatically unlock the door. Access is then by means of the usual lock.
- If a guest happens to forget to hand back the Hotel Card on departure, the card will lose its access function due to the programmed time limit.
- Hotel Cards which are returned on departure can be assigned new access rights many times. The service life of the card is almost unlimited.

Specific advantages of Dialock:

- All access rights for guests, staff and service providers are managed centrally.
- Check-in and check-out require minimal time.
- Dialock software can be integrated into your hotel management system.
- Reports including each access event for each key with indication of times and rooms can be generated.
- One and the same Hotel Card can be assigned access rights to additional facilities such as lifts, car parks, furniture and leisure facilities.
- The Dialock system can be extended at any time to cover the specific needs of your hotel.

Dialock –Design and function to suit your hotel

Dialock door terminals, the heart of the Dialock system, have been developed with the demanding applications in hotels in mind, and have been tested and proven in many hotels worldwide.

Door terminals are available in a variety of finishes and handle designs. You can choose the design to match the style of your hotel. Your hotel logo can be printed on the scanner.

The rotary knob will allow your guests to activate the “do not disturb” function in the usual way.

Technical know-how:

- Low-cost operation using commercially available and easy-to-replace 1.5 Volt batteries
- Permanent monitoring and warning signal when battery is low
- Mechanical emergency access possible
- Can be retrofitted to existing DIN mortise locks
- Can also be used for fire and smoke doors

Dialock grows with your requirements

With Dialock, you can manage access to your hotel and billing. All movements are stored on one card, which is read out at check-out to allow the bill to be prepared:

e.g. leisure facilities such as solarium, sauna, swimming pool etc., including changing room lockers

e.g. access to the garage and the car park

e.g. control of lifts

e.g. energy saving activities

e.g. integration of access to cupboards and display cases
