

SKI LOCKERS

With the Kupan Ski Lockers a unique possibility can be offered to locker renters and skiers for not only practical storing of skies, clothing and boots but also drying them with an ingenious ventilation system.

The ventilation system provides a constant heated air stream that makes sure that clothing, helmet and boots will dry very quickly.

Extensive tests have proved the quality of this unique concept more over. The special combination of lockers with ventilation systems makes very efficient equipment possible which also makes this Kupan concept interesting in a budget-technical way.

Kupan Ski lockers are manufactured of water resistant HPL. The doors are 13 mm thick, walls bottom and ceiling are 8 mm and the back wall has a thickness of 2.5 mm.

Locks: the lockers are standard equipped with cam locks (see also the list below with options)

Kupan Ski Lockers are specially developed for intensive use, are extremely strong and have inlaying doors for optimal stability and are difficult to break in. Manufacturing tailor made lockers makes it possible to integrate your total design and using style elements can give the concept an unique appearance.

Dimensions of 3 column locker unit:
Height 1820 mm, width 1268 mm, depth 500 mm.
(Suitable for 3 helmets, 3 ski jackets and 6 ski boots)
